KEY WORDS Solid State Lasers, Liquid Lasers, Gas Lasers, Chemical Lasers, Laser Components, Nonlinear Optics, Spectroscopy of Laser Materials, Ultrashort Pulse Generation, Crystal Growing, Gamma Lasers, Laser Theory, Laser Biological Effects, Laser Communications, Laser Beam Propagation, Laser Computer Technology, Holography, Laser Chemical Effects, Laser Parameters, Laser Measurement Applications, Laser-Excited Optical Effects, Laser Beam-Target Interaction, Laser Plasma		
20. ABSTRACT This is the Soviet Laser Bibliography for September-October 1978 and is no. 37 in a continuing series on Soviet laser developments. The coverage includes basic research on solid state, liquid, gas, and chemical lasers; components; nonlinear optics; spectroscopy of laser materials; ultrashort pulse generation; crystal growing; theoretical aspects of advanced lasers; and general laser theory. Laser applications are listed under biological effects; communications; beam propagation; computer technology; holography; laser-induced chemical reactions; measurement of laser parameters; laser measurement applications; laser-excited optical effects; beam-target interaction; and plasma generation and diagnostics.		

This document has been approved
for public release and sale; its
distribution is unlimited.

BIBLIOGRAPHY OF SOVIET LASER DEVELOPMENTS

No. 37

SEPTEMBER - OCTOBER 1978

Date of Report

June 6, 1979

Vice Director for Production
Defense Intelligence Agency

This document was prepared for the Defense Intelligence Agency under an intragovernment agreement. It is intended to facilitate access of government researchers to Soviet laser literature.

Comments should be addressed to the Defense Intelligence Agency, Directorate for Scientific and Technical Intelligence, ATTN: DT-1A.

Introduction

This bibliography has been compiled under an interagency agreement as a continuing effort to document current Soviet-bloc developments in the quantum electronics field. The period covered is September-October 1978, and includes all significant laser-related articles received by us in that interval. The bulk of the entries come from the approximately 30 periodicals which are known to publish the most significant findings in Soviet laser technology. Citations from the Russian Reference Journals are included, as well as entries from the CIRC data base not otherwise covered. Laser items from the popular or semipopular press are generally omitted.

For convenience we have abbreviated frequently cited source names; a source abbreviations list and an author index are included. All sources cited with no parenthetical notation are available at the Library of Congress. A parenthetical entry (RZh, KL) indicates the secondary source in which the citation was found as a bibliographic entry or abstract, but for which the original source is not currently available at the Library. The authors' affiliations are indicated by the numbers in parentheses following the authors' names in the text and are listed in the Author Affiliations List. New affiliations are assigned a new number and are added to a cumulative list which includes all affiliations from 1969 to the present. Only those affiliations which appear in this issue are listed in this issue's Author Affiliations List.

SOVIET LASER BIBLIOGRAPHY, SEPTEMBER - OCTOBER 1978

TABLE OF CONTENTS

I. BASIC RESEARCH

A. Solid State Lasers

1. Crystal: Ruby	1
2. Crystal: Rare-Earth Activated	
a. Nd ³⁺	1
3. Crystal: Miscellaneous	1
4. Semiconductor: Simple Junction	
a. GaAs	2
b. CdS	2
5. Semiconductor: Mixed Junction	---
6. Semiconductor: Heterojunction	2
7. Semiconductor: Theory	3
8. Glass: Nd	4
9. Glass: Miscellaneous	---

B. Liquid Lasers

1. Organic Dyes	
a. Rhodamine	5
b. Polymethine	5
c. Phthalimide	5
d. Coumarin	5
e. Miscellaneous Dyes	6
2. Inorganic Liquids	---

C. Gas Lasers

1. Simple Mixtures	
a. He-Ne	7

2. Molecular Beam and Ion	
a. CO ₂	8
b. CO ₂	11
c. Noble Gas	12
d. N ₂	12
e. Metal Vapor	12
f. Gasdynamic	14
3. Excimer	16
4. Theory	18
D. Chemical Lasers	
1. F ₂ +H ₂ (D ₂)	---
2. Photodissociative	20
3. Transfer	21
E. Components	
1. Resonators	22
2. Pump Sources	22
3. Deflectors	23
4. Filters	24
5. Detectors	24
6. Modulators	25
F. Nonlinear Optics	
1. Frequency Conversion	28
2. Parametric Processes	29
3. Stimulated Scattering	
a. Raman	29
b. Brillouin	30
c. Miscellaneous Scattering	30
4. Self-focusing	30
5. Acoustic Interaction	30
6. General Theory	31
G. Spectroscopy of Laser Materials	32
H. Ultrashort Pulse Generation	33
J. Crystal Growing	34

K.	Theoretical Aspects of Advanced Lasers	34
